# User-centric performance metrics

When a user navigates to a web page, they're typically looking for visual feedback to reassure them that everything is going to work as expected.

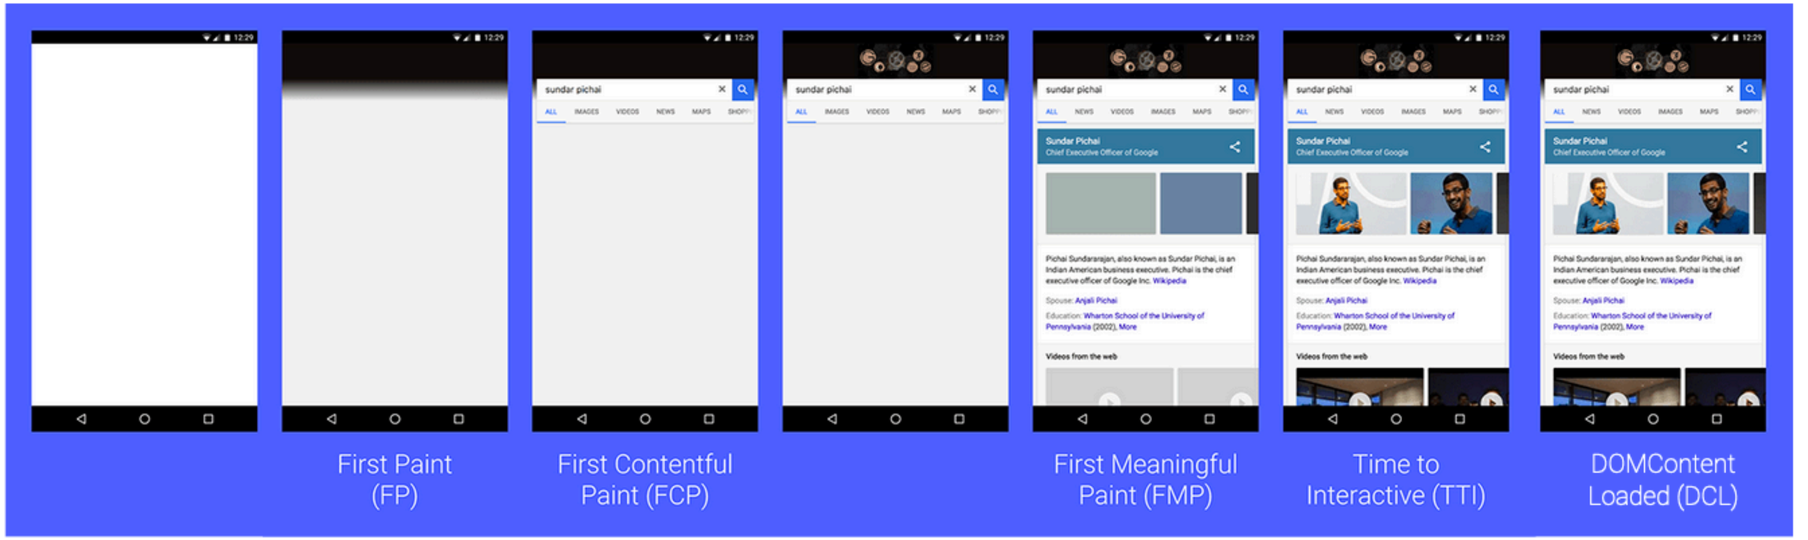

| | |
|---|---|
| **Is it happening?** | Did the navigation start successfully? Has the server responded? |
| **Is it useful?** | Has enough content rendered that users can engage with it? |
| **Is it usable?** | Can users interact with the page, or is it still busy loading? |
| **Is it delightful?** | Are the interactions smooth and natural, free of lag and jank? |

To understand when a page delivers this feedback to its users, we've defined several new metrics:

https://developers.google.com/web/fundamentals/performance/user-centric-performance-metrics

"Is it happening?" "Is it useful?" "Is it usable?"

https://developers.google.com/web/fundamentals/performance/user-centric-performance-metrics

TTFB

# Time to First Byte

the time between clicking a link and the first bit of content coming in.

# What contributes to TTFB?

- Initial request to a website
- DNS resolution to a to server's IP address
- Establish connection with the server
- Secure connection with the server
- Potential redirects
- Response

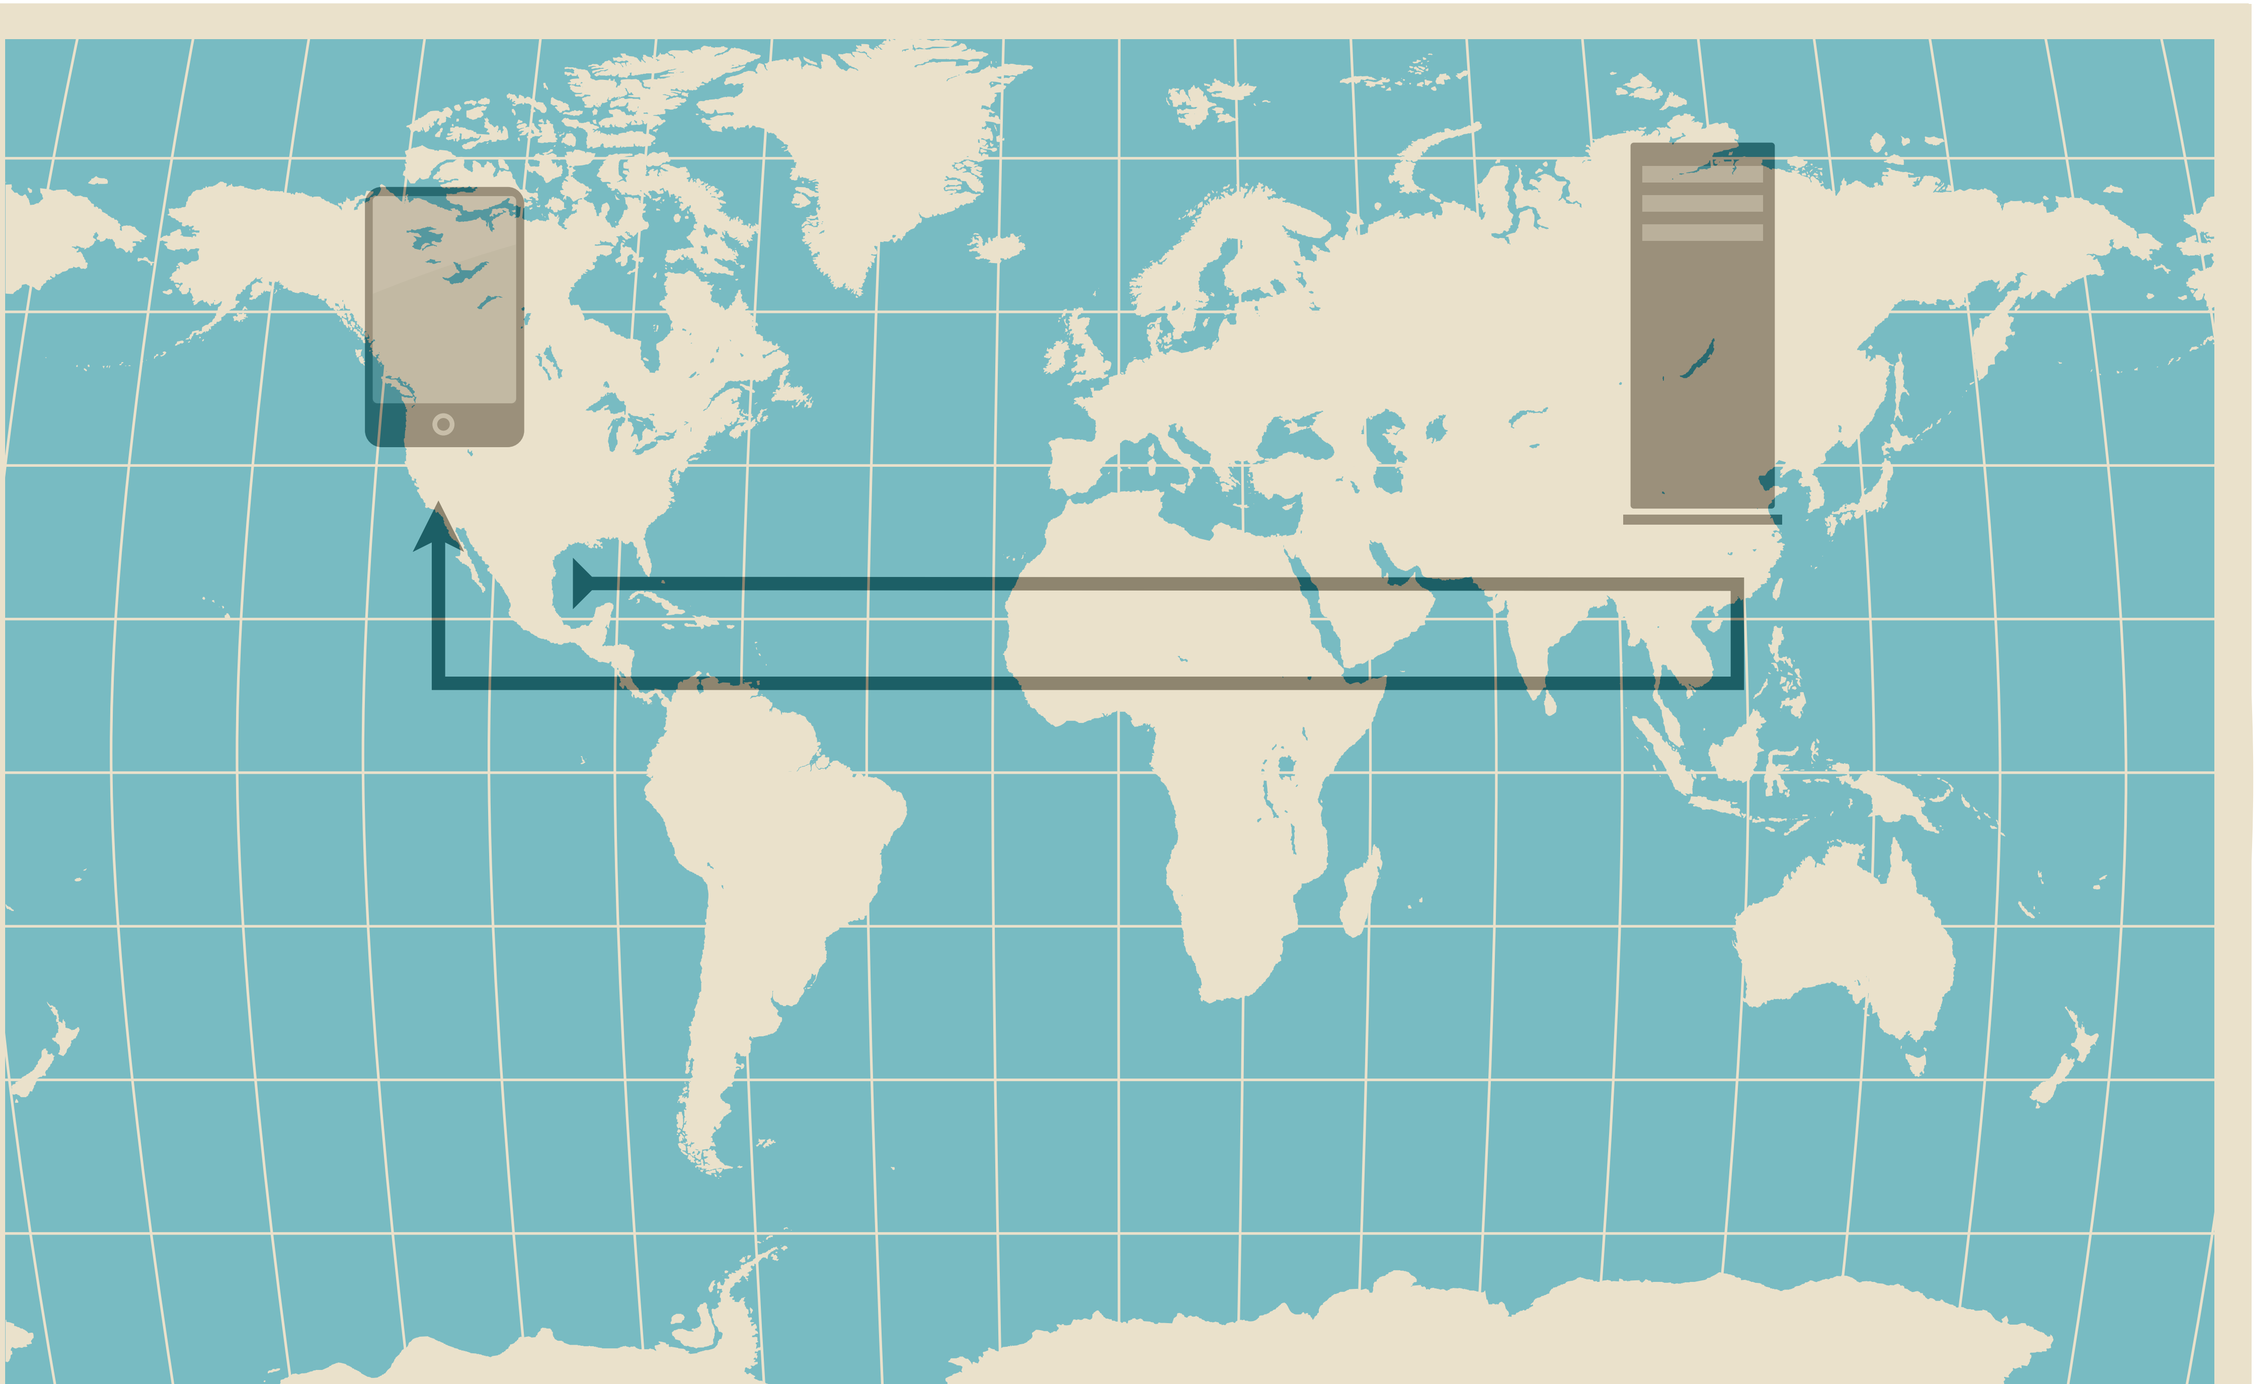

“

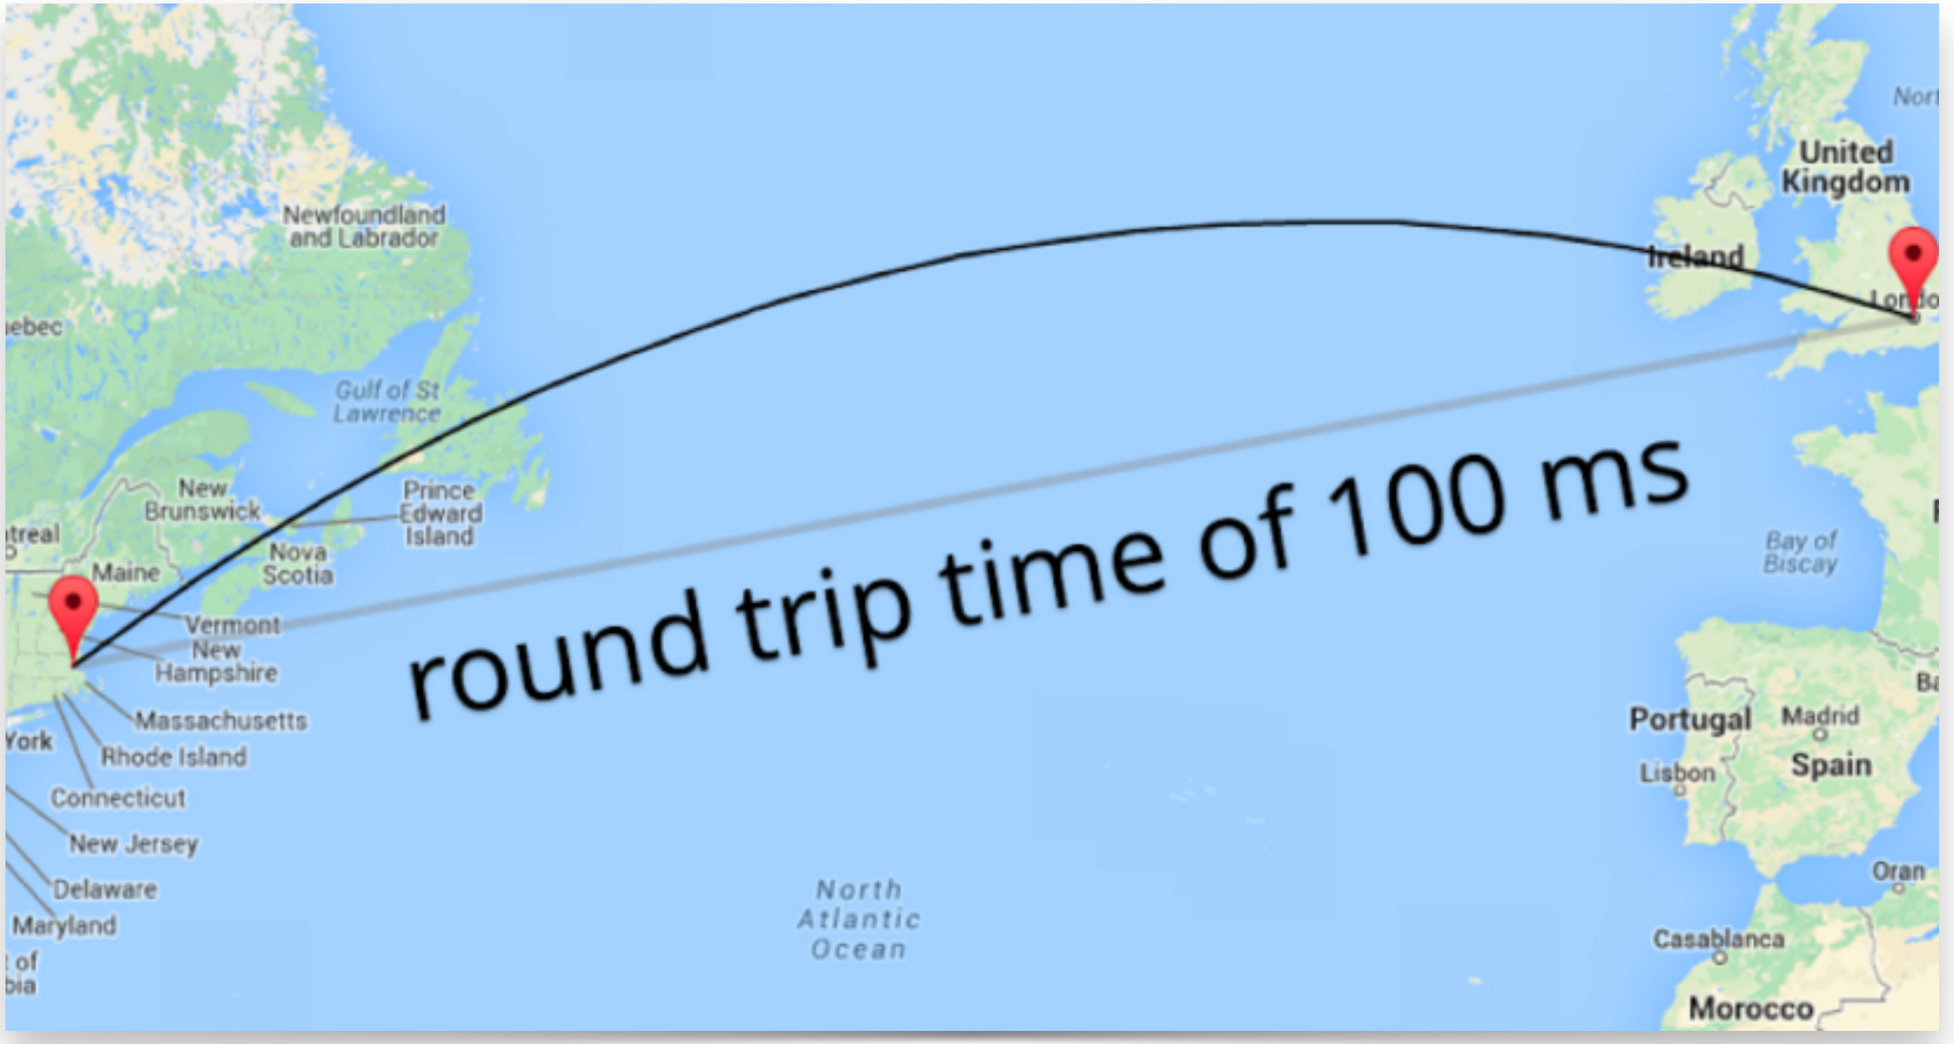

when it comes to your web browsing experience, it turns out that **latency, not bandwidth,** is likely the constraining factor today.

Ilya Grigorik

https://www.igvita.com/2012/07/19/latency-the-new-web-performance-bottleneck/

# Server time impacts on TTFB

- Generally, static pages need less server time
- Dynamic pages tend to use more server time

Every 3rd party request:

# New connection process

SR

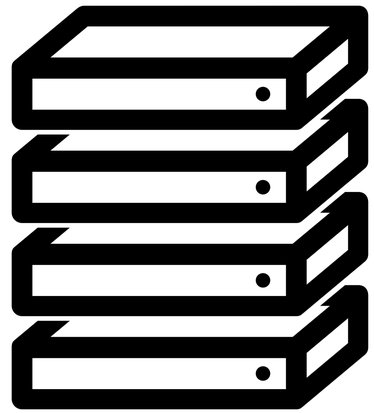

# Start Render

The first time pixels start to become visible to the user.

Example.com please!

Sure! Here's the HTML first.

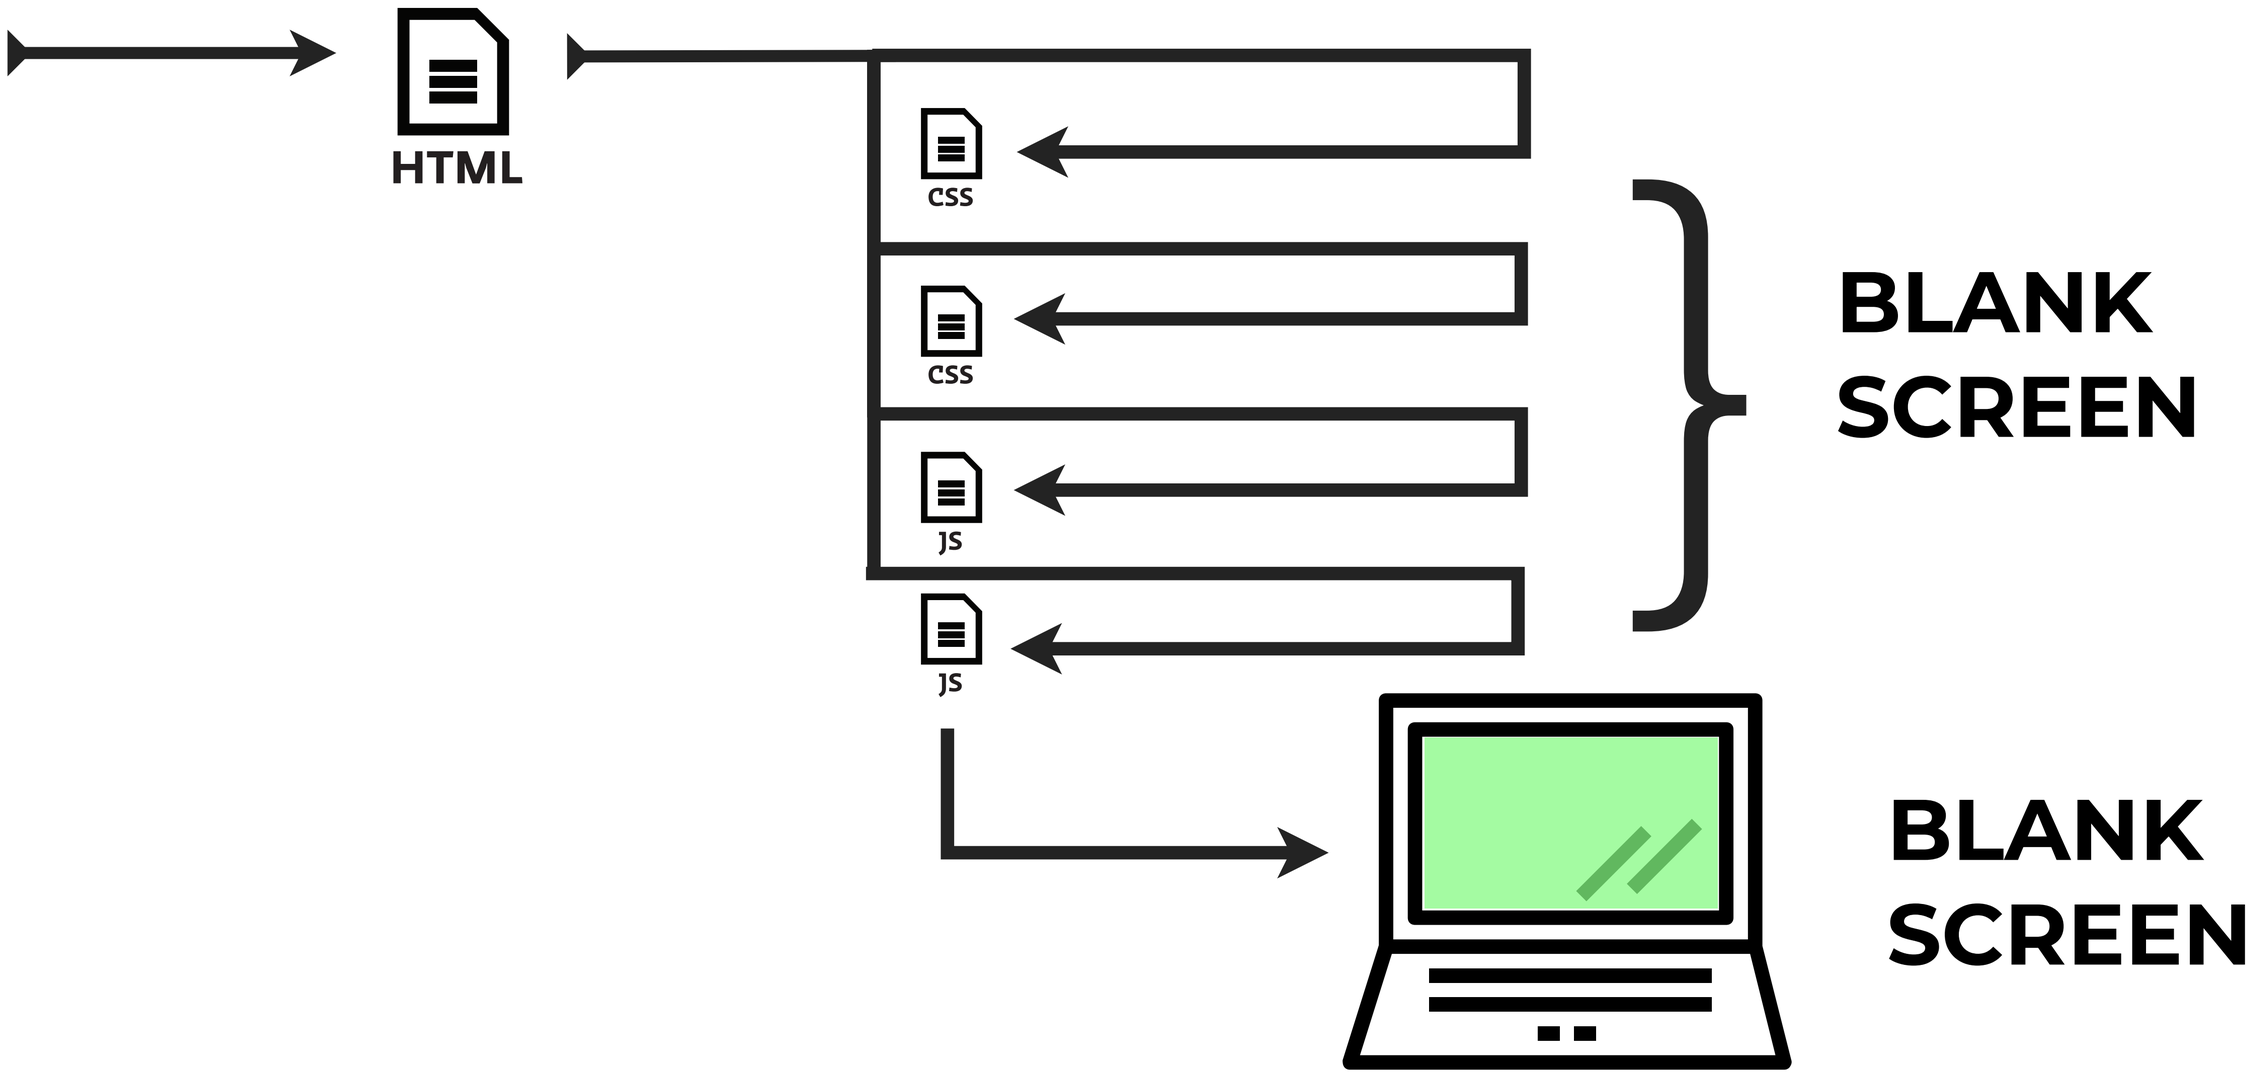

# The render blockers

## Democrats Divided Over Trump's Stonewalling as Calls for Impeachment Inquiry Grow

- Democrats were at odds about how to fight the latest defiance of a House subpoena, this time by the former White House counsel Donald McGahn.
- Some progressive lawmakers are pushing for the first time for an impeachment inquiry, over leaders' objections.

1h ago 841 comments

## Trump Expected to Pick Hard-Liner for Immigration Post

The job's duties and title are still being decided, but Ken Cuccinelli, a former Virginia attorney general, is expected to become a policy coordinator.

**Scott Jehl** @scottjehl · 6m

I was curious how long browsers these days will wait for a JavaScript file to load before displaying content that comes after it in the page. So I tested it!

Chrome: 30s
Firefox: 30s
Edge: 20s
IE 11: 7s
Safari: 60s
Android Chrome: 63s
iOS: 75s

Test runs tinyurl.com/swngjl3

“

When creating great user experiences, managing CPU usage is now just as important as fast networks.

Mark Zeman, SpeedCurve

https://speedcurve.com/blog/your-javascript-hurts/

TBT

# Total Blocking Time

The total amount of time interaction is blocked between FCP and TTI.

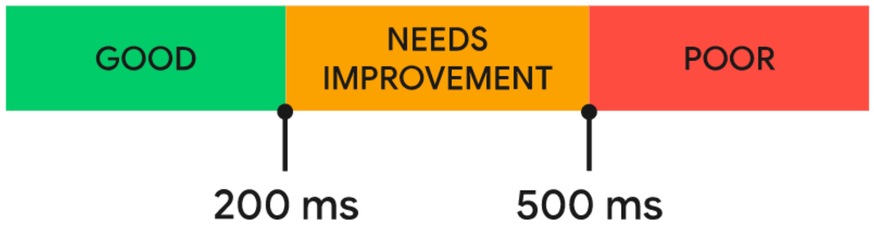

INP

# Interaction to Next Paint

The time it takes a page to visually respond to user interaction.

# INP

Interaction to Next Paint

FID

# First Input Delay

The interaction delay after the first user interaction with the page.

*(Loading)*

# LCP

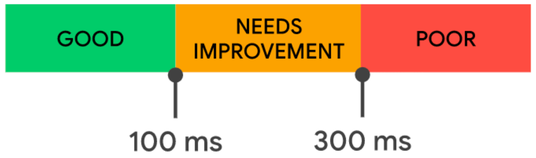

Largest Contentful Paint

*(Interactivity)*

# FID

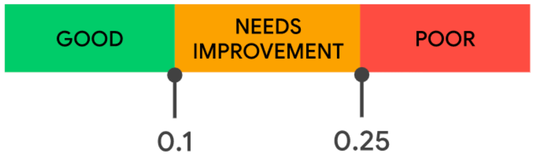

First Input Delay

*(Visual Stability)*

# CLS

Cumulative Layout Shift

Still important:

# Fully Loaded

The time at which all page assets have finished loading.

Still important:

# Total Bytes

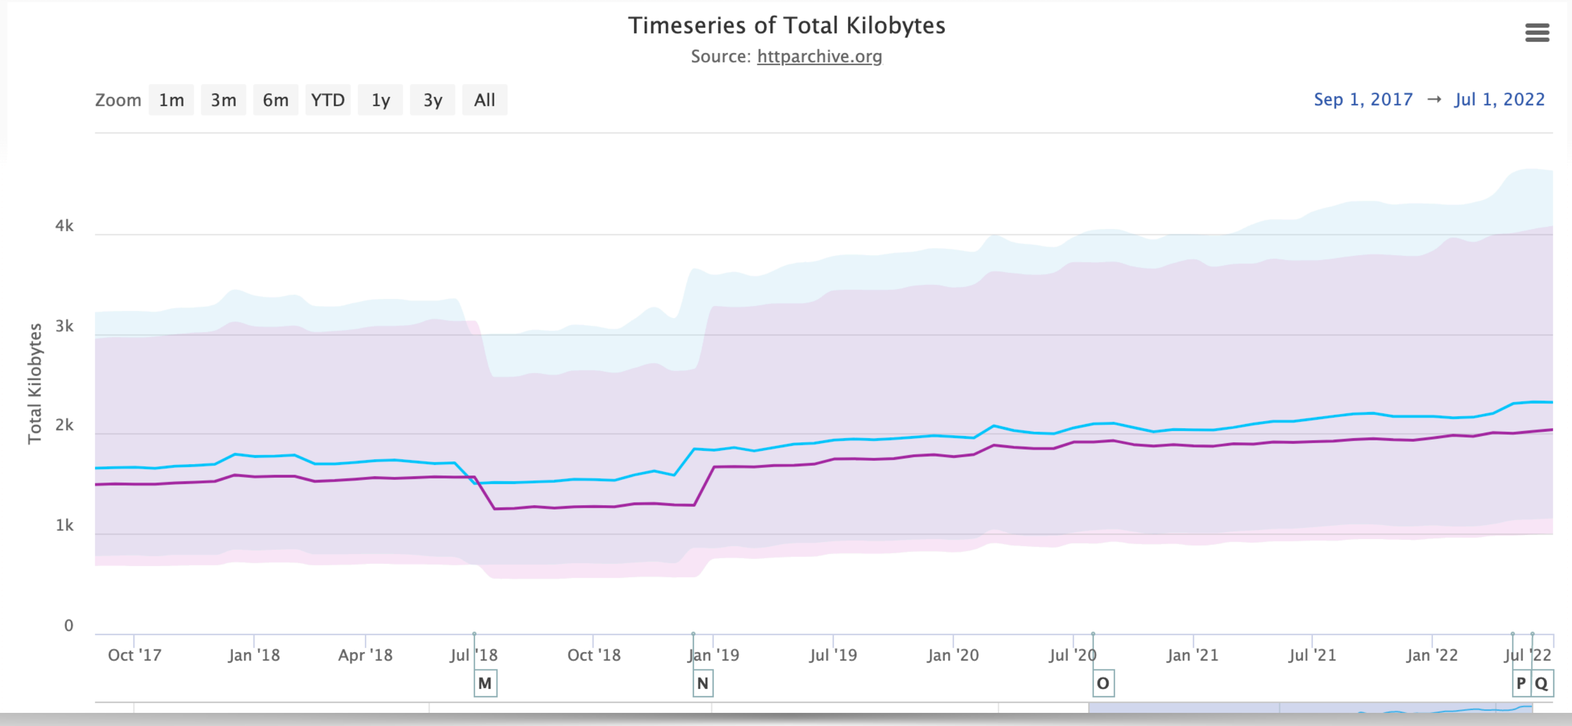

Not a user-perceivable metric (*until they check their data bill!*)

## Total Kilobytes

The sum of transfer size kilobytes of all resources requested by the page.
